

Benefits from the support of NCI-level specialists

It's easy. It's free. And all treatment decisions remain your own.

AccessHope is a cancer support services company that provides an employer-sponsored benefit to your patients employed by one of our partners. We connect you to our specialists with National Cancer Institute–Designated Comprehensive Cancer Centers who can support you with subspecialty expertise in your patient's cancer at no cost.

Patient support services through their employer-paid benefits

Accountable Precision Oncology

When your patient receives a rare- or complex-cancer diagnosis, their case automatically goes to AccessHope. We then reach out to you for the patient's medical records and treatment plan, so our cancer subspecialist can review the case and leverage NCI-level expertise to provide recommendations to you as their oncologist, while you continue to create and modify the treatment plan.

Expert Advisory Review

Patients can request that an AccessHope medical expert reviews their case. The subspecialist will provide you with recommendations for their treatment plan based on emerging research and discoveries.

Why AccessHope?

Doctor-to-doctor communication

Knowledgeable in the latest discoveries and treatments for all cancer subtypes, our subspecialists can connect with you to discuss the insights they provide on each patient's case.

NCI-level expertise

Our subspecialists' evidence-based recommendations are associated with improved clinical outcomes. These recommendations include the latest research findings and any suggested medications, tests, or clinical trials.

Patient care

You create and modify your patients' treatment plans, enabling them to stay in your care and close to home with their support system of family and friends.

Meet AccessHope's clinical experts

Todd Sachs, MD

Dr. Sachs leads AccessHope's clinical team and oversees the remote delivery of our cancer support services. Passionate about addressing healthcare disparities and promoting value-based care, Dr. Sachs is deeply dedicated to staying in the know on the newest protocols and medications in the always-advancing field of oncology.

Jack West, MD

Dr. West is the Executive Medical Director at AccessHope and an Associate Clinical Professor in Medical Oncology and Therapeutics Research at City of Hope. He's dedicated to finding innovative approaches to delivering subspecialist expertise, using tools such as remote case reviews and telemedicine consultations.

Debra Wong, MD

Dr. Wong is a board-certified medical oncologist and a Medical Director at AccessHope, where she holds dual roles in teleoncology for community oncologists and their patients, and organizational strategy development. She maintains broad expertise in solid tumor oncology and advocates for integrating supportive care and quality-of-life measures into precision oncology care.

Asfsaneh Barzi, MD, PhD

Dr. Barzi is AccessHope's Medical Director of gastrointestinal oncology, specializing in the treatment of gastrointestinal cancers affecting the colon, rectum, pancreas, stomach, and liver. She's passionate about improving her patients' quality of life, believing in not just high-quality care but also "high-intensity" care.

About AccessHope

AccessHope believes in putting the ever-growing body of cancer knowledge to work for the greater good. We deliver a revolutionary benefit that remotely connect patients and their treating oncologists to its multidisciplinary specialists with NCI-Designated Comprehensive Cancer Centers. These specialists leverage renowned cancer knowledge and expertise to support the treating doctors, closing the knowledge gap and leveling health disparities while patients stay close to home.
