

AccessHope's clinical and cost impacts, validated by a peer-reviewed study

Our subspecialists provided evidence-based recommendations to influence the treatment plan in:

93% of lung cancer cases

65% with modifications

28% with significant recommendations

These clinical and humanistic benefits were accompanied by an average savings of **\$19K per patient**

Our subspecialists agreed completely with the treatment plan in only 7% of cases

110 cases of lung cancers
April 2019 to November 2020

- 85% from community-based oncologists
- Case volumes increased despite COVID-19
- 55%  , 45% 
- 18% were never smokers, 57% were past smokers, 26% were current smokers, and 1% were unclassified
